

## Composite Fins for Heat Sinks

### Abstract of the Disclosure

A heat sink that dissipates heat from an electronic device. The heat sink  
5 includes a base that is adapted to be thermally coupled to the electronic device, and  
a fin that is thermally coupled to the base. The fin includes a first portion made  
from a first material and a second portion made from a second material. One edge  
of the first portion and an opposing edge of the second portion form at least one of a  
lap joint and a butt joint between the first portion and the second portion. In some  
10 forms, the first portion of the fin is a copper portion that is thermally coupled to a  
copper base to conduct thermal energy away from the base, and the second portion  
of the fin is aluminum.
